Chapter 3

Class Documentation

3.1 Node Struct Reference

```
#include <node.h>
```

Public Member Functions

- Node (int frequency)
- Node (int frequency, char character)

Public Attributes

- int frequency
- char character
- std::string code
- Node * left = NULL
- Node * right = NULL

3.1.1 Detailed Description

Struktura ta to wezel przechowujacy informacje o czestotliwosci okreslonego znaku oraz jego kodu, stanowi element drzewa Huffmana.

3.1.2 Constructor & Destructor Documentation

3.1.2.1 Node() [1/2]

Domyslny konstruktor wezla pustego.

6 Class Documentation

Parameters

czestotliwosc wystepowania znakow	frequency
-----------------------------------	-----------

3.1.2.2 Node() [2/2]

```
Node::Node (
                int frequency,
                char character )
```

Domyslny konstruktor wezla ze znakiem.

Parameters

frequency	czestotliwosc wystepowania znaku
character	znak dla jakiego jest przypisana czestotliwosc

3.1.3 Member Data Documentation

3.1.3.1 character

char Node::character

3.1.3.2 code

std::string Node::code

3.1.3.3 frequency

int Node::frequency

3.1.3.4 left

Node* Node::left = NULL

3.1.3.5 right

```
Node* Node::right = NULL
```

The documentation for this struct was generated from the following files:

- node.h
- node.cpp

3.2 NodeComparator Struct Reference

```
#include <node.h>
```

Public Member Functions

• bool operator() (const Node *leftNode, const Node *rightNode)

3.2.1 Detailed Description

Struktura ta sluzy jedynie do porownywania ze soba dwoch wezlow struktury 'Node', jej implementacja jest wymagana przez std::priority_queue.

3.2.2 Member Function Documentation

3.2.2.1 operator()()

The documentation for this struct was generated from the following files:

- node.h
- · node.cpp

8 Class Documentation

Chapter 4

File Documentation

4.1 functions.cpp File Reference

```
#include <iostream>
#include <fstream>
#include "functions.h"
#include "utils.h"
```

Functions

- void makeFrequencyDictionary (const std::string &text, std::map< char, int > &frequency)
- void loadFrequencyDictionary (const std::string &dict_filepath, std::map< char, int > &frequency)
- void saveFrequencyDictionary (const std::string &dict_filepath, const std::map< char, int > &frequency)
- void makeHeap (std::priority_queue < Node *, std::vector < Node * >, NodeComparator > &minBinaryHeap, const std::map < char, int > &frequency)
- void calculateCodes (Node *root, std::map< char, std::string > &dictionary, std::string code)
- void encode (const std::string &input_filepath, const std::string &output_filepath, std::map< char, std::string > &dictionary)
- void compress (const std::string &input_filepath, const std::string &output_filepath, const std::string &dict_← filepath)
- void decompress (const std::string &input_filepath, const std::string &output_filepath, const std::string &dict
 — filepath)
- void decode (const std::string &input_filepath, const std::string &output_filepath, std::map< char, std::string > &dictionary, std::map< char, int > &frequency)

4.1.1 Function Documentation

4.1.1.1 calculateCodes()

Oblicza kody dla kazdego unikatowego znaku przemieszczajac sie po drzewie Huffmana okreslonym w zmiennej 'minBinaryHeap'.

Parameters

root	wskaznik na koniec kolejki priorytetowej
dictionary	referencja do slownika
code	argument opcjonalny do wewnetrznego zastosowania

4.1.1.2 compress()

Interfejs sluzacy do kompresji pliku wejsciowego do wyjsciowego i zapisania pliku slownikowego za pomoca algorytmu Huffmana.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dict_filepath	sciezka do pliku slownikowego

4.1.1.3 decode()

Odkodowuje plik ze sciezki okreslonej w zmiennej klasowej 'input_filepath' do sciezki wyjsciowej 'output_filepath' funkcja ta jedynie opakowuje funkcje prywatne do prostej uzywalnej formy.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dictionary	referencja do slownika
frequency	referencja do frekwencji wystepowania znakow

4.1.1.4 decompress()

```
void decompress (
```

```
const std::string & input_filepath,
const std::string & output_filepath,
const std::string & dict_filepath )
```

Interfejs sluzacy do dekompresji pliku wejsciowego do wyjsciowego przy uzyciu okreslonego slownika.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dict_filepath	sciezka do pliku slownikowego

4.1.1.5 encode()

Koduje plik ze sciezki okreslonej w zmiennej klasowej 'input_filepath' do sciezki wyjsciowej 'output_filepath', funkcja ta jedynie opakowuje funkcje do prostej uzywalnej formy.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dictionary	referencja do slownika

4.1.1.6 loadFrequencyDictionary()

Laduje slownik unikatowych znakow z pliku, sciezka do pliku jest okreslona w zmiennej 'dict_filepath' klasy.

Parameters

dict_filepath	sciezka do pliku slownikowego
frequency	referencja do frekwencji wystepowania znakow

4.1.1.7 makeFrequencyDictionary()

```
void makeFrequencyDictionary ( const\ std::string\ \&\ text, std::map<\ char,\ int\ >\ \&\ frequency\ )
```

Tworzy słownik unikatowych znakow na podstawie przesłanego tekstu oraz zlicza ich wystapienie.

Parameters

text	referencja do tekstu do wyszukania unikatowych znakow
frequency	referencja do frekwencji wystepowania znakow

4.1.1.8 makeHeap()

Tworzy drzewo Huffmana w postaci kolejki priorytetowej cpriority_queue> oraz zapelnia je danymi ze slownika.

Parameters

minBinaryHeap	referencja do kolejki priorytetowej
frequency	referencja do frekwencji wystepowania znakow

4.1.1.9 saveFrequencyDictionary()

Zapisuje slownik unikatowych znakow do pliku, sciezka do pliku jest okreslona w zmiennej 'dict_filepath' klasy.

Parameters

dict_filepath	sciezka do pliku slownikowego
frequency	referencja do frekwencji wystepowania znakow

4.2 functions.h File Reference

```
#include <string>
```

```
#include <map>
#include <queue>
#include <vector>
#include "node.h"
```

Functions

- void makeFrequencyDictionary (const std::string &text, std::map< char, int > &frequency)
- void loadFrequencyDictionary (const std::string &dict_filepath, std::map< char, int > &frequency)
- void saveFrequencyDictionary (const std::string &dict_filepath, const std::map< char, int > &frequency)
- void makeHeap (std::priority_queue < Node *, std::vector < Node * >, NodeComparator > &minBinaryHeap, const std::map < char, int > &frequency)
- void calculateCodes (Node *root, std::map< char, std::string > &dictionary, std::string code="")
- void encode (const std::string &input_filepath, const std::string &output_filepath, std::map< char, std::string > &dictionary)
- void decode (const std::string &input_filepath, const std::string &output_filepath, std::map< char, std::string > &dictionary, std::map< char, int > &frequency)
- void compress (const std::string &input_filepath, const std::string &output_filepath, const std::string &dict_← filepath)
- void decompress (const std::string &input_filepath, const std::string &output_filepath, const std::string &dict
 — filepath)

4.2.1 Function Documentation

4.2.1.1 calculateCodes()

```
void calculateCodes (
          Node * root,
          std::map< char, std::string > & dictionary,
          std::string code = "" )
```

Oblicza kody dla kazdego unikatowego znaku przemieszczajac sie po drzewie Huffmana okreslonym w zmiennej 'minBinaryHeap'.

Parameters

root	wskaznik na koniec kolejki priorytetowej
dictionary	referencja do slownika
code	argument opcjonalny do wewnetrznego zastosowania

4.2.1.2 compress()

```
const std::string & output_filepath,
const std::string & dict_filepath )
```

Interfejs sluzacy do kompresji pliku wejsciowego do wyjsciowego i zapisania pliku slownikowego za pomoca algorytmu Huffmana.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dict_filepath	sciezka do pliku slownikowego

4.2.1.3 decode()

Odkodowuje plik ze sciezki okreslonej w zmiennej klasowej 'input_filepath' do sciezki wyjsciowej 'output_filepath' funkcja ta jedynie opakowuje funkcje prywatne do prostej uzywalnej formy.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dictionary	referencja do slownika
frequency	referencja do frekwencji wystepowania znakow

4.2.1.4 decompress()

Interfejs sluzacy do dekompresji pliku wejsciowego do wyjsciowego przy uzyciu okreslonego slownika.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dict filepath	sciezka do pliku slownikowego

4.2.1.5 encode()

Koduje plik ze sciezki okreslonej w zmiennej klasowej 'input_filepath' do sciezki wyjsciowej 'output_filepath', funkcja ta jedynie opakowuje funkcje do prostej uzywalnej formy.

Parameters

intput_filepath	sciezka do pliku wejsciowego
output_filepath	sciezka do pliku wyjsciowego
dictionary	referencja do slownika

4.2.1.6 loadFrequencyDictionary()

Laduje slownik unikatowych znakow z pliku, sciezka do pliku jest okreslona w zmiennej 'dict_filepath' klasy.

Parameters

dict_filepath	sciezka do pliku slownikowego
frequency	referencja do frekwencji wystepowania znakow

4.2.1.7 makeFrequencyDictionary()

```
void makeFrequencyDictionary ( const \ std::string \ \& \ text, std::map < \ char, \ int \ > \ \& \ frequency \ )
```

Tworzy slownik unikatowych znakow na podstawie przeslanego tekstu oraz zlicza ich wystapienie.

Parameters

text	referencja do tekstu do wyszukania unikatowych znakow
frequency	referencja do frekwencji wystepowania znakow

4.2.1.8 makeHeap()

```
void makeHeap (  std::priority\_queue < Node *, std::vector < Node * >, NodeComparator > \& min \leftarrow \\ BinaryHeap, \\ const std::map < char, int > \& frequency )
```

Tworzy drzewo Huffmana w postaci kolejki priorytetowej cpriority_queue> oraz zapelnia je danymi ze slownika.

Parameters

minBinaryHeap	referencja do kolejki priorytetowej
frequency	referencja do frekwencji wystepowania znakow

4.2.1.9 saveFrequencyDictionary()

Zapisuje slownik unikatowych znakow do pliku, sciezka do pliku jest okreslona w zmiennej 'dict filepath' klasy.

Parameters

dict_filepath	sciezka do pliku slownikowego
frequency	referencja do frekwencji wystepowania znakow

4.3 functions.h

Go to the documentation of this file.

```
1 #ifndef FUNCTIONS_H
2 #define FUNCTIONS_H
3
4 #include <string>
5 #include <map>
6 #include <queue>
7 #include <vector>
8
9 #include "node.h"
10
18 void makeFrequencyDictionary(const std::string &text, std::map<char, int> &frequency);
19
28 void loadFrequencyDictionary(const std::string &dict_filepath, std::map<char, int> &frequency);
29
38 void saveFrequencyDictionary(const std::string &dict_filepath, const std::map<char, int> &frequency);
39
47 void makeHeap(std::priority_queue<Node *, std::vector<Node *>, NodeComparator> &minBinaryHeap, const std::map<char, int> &frequency);
48
57 void calculateCodes(Node *root, std::map<char, std::string> &dictionary, std::string code = "");
58
```

4.4 main.cpp File Reference

```
#include <iostream>
#include <unistd.h>
#include "utils.h"
#include "functions.h"
```

Functions

- void printHelp ()
- int main (int argc, char *argv[])

4.4.1 Function Documentation

4.4.1.1 main()

```
int main (
                int argc,
                 char * argv[] )
```

4.4.1.2 printHelp()

```
void printHelp ( )
```

4.5 node.cpp File Reference

```
#include "node.h"
```

4.6 node.h File Reference

#include <iostream>

Classes

- struct Node
- struct NodeComparator

4.7 node.h

Go to the documentation of this file.

```
#ifndef NODE_H
2 #define NODE_H
4 #include <iostream>
11 struct Node
13 public:
      int frequency;
15
       char character;
16
17
     std::string code;
    Node *left = NULL;
Node *right = NULL;
18
19
20
26
     Node(int frequency);
27
34
     Node(int frequency, char character);
35 };
42 struct NodeComparator
43 {
44 public:
      bool operator()(const Node *leftNode, const Node *rightNode);
4.5
46 };
48 #endif
```

4.8 utils.cpp File Reference

```
#include "utils.h"
```

Functions

• std::string getFileContent (const std::string filepath)

4.8.1 Function Documentation

4.8.1.1 getFileContent()

Funkcja wczytuje zawartosc pliku okreslonego w sciezce.

4.10 utils.h

Parameters

Returns

funkcja zwraca std::string zawartosci

4.9 utils.h File Reference

```
#include <iostream>
#include <fstream>
```

Functions

• std::string getFileContent (const std::string filepath)

4.9.1 Function Documentation

4.9.1.1 getFileContent()

Funkcja wczytuje zawartosc pliku okreslonego w sciezce.

Parameters

```
filepath sciezka do pliku
```

Returns

funkcja zwraca std::string zawartosci

4.10 utils.h

Go to the documentation of this file.

```
1 #ifndef UTILS_H
2 #define UTILS_H
3
4 #include <iostream>
5 #include <fstream>
6
13 std::string getFileContent(const std::string filepath);
14
15 #endif
```
